## ⚙ Other Personal Projects

- All projects are in development and beta test, the purpose is only expanded the knowledge about this Api's and Languages, with all working together to provide a right, fast and mobile information in a unique application
- **Market List** (<http://shop.martche.ca>)
  - Main Idea: Mobile Application to compare products price filtering by places, products, time, location and others parameters
  - Apis & Languages: Google Maps Api, Jquery-Mobile, PhoneGap, Apache Cordova, HTML5
- **Facebook auto-answer** (<https://apps.facebook.com/auto-answer/>)
  - Main Idea: Robot that will comment all your next posts with one random answer. All comments need be add by the user and the page need stay opened. Next version will be incorporate with facebook server, the user only turn on the app directly from your profile page and some others features.
  - If the link don't work try click here and accept the security terms first, then the main link will work normally. It's because I used only for tests and I don't want pay the expensive bill for the security web sites.
  - Apis & Languages: Facebook Api, Jquery
- **Feeds customized for Facebook** (<https://apps.facebook.com/search-feed/>)
  - Web application to customize what kind of News/Post show in user feed list. Hide or Highlight specific posts using user preferences.
  - Apis & Languages used: Facebook Api, HTML5, PHP, MySql, JavaScript, Jquery, Ajax
- **SetList** (<http://setlist.martche.ca>)
  - Main Idea: Web application to list about music and instrument that the user know play. With this info, he can marge your list with your friends, improving the time later choosing the musics.
  - Apis & Languages used: Grooveshark Api, Facebook Api, Lyrics Api, Google Maps, HTML, PHP, Jquery
- **Loja da Fumaça** (<http://lojadafumaca.com>)
  - Open-souce Ecommerce enviroment
